

SKILL

WEEK- 5:

Task 1: To Apply Single Quotes, Preserve Literal Content, Ignore Variable Expansion, Store Quoted Strings, Validate Parsing Results, Test Edge Cases.

Task 2: To Apply Double Quotes, Preserve Spaces, Allow Variable Expansion, Parse Nested Tokens, Validate Outputs, Test Quoted Commands.

```
#include <stdio.h>
#include <string.h>

int main() {
    char name[] = "Bharath";

    /* These strings represent content that should remain literal */
    char single_quoted[] = "$name";
    char path[] = "/home/user/$name";
    char special[] = "Hello $USER";

    printf("Original variable:\n");
    printf("name = %s\n\n", name);

    printf("Literal content:\n");
    printf("single_quoted = %s\n", single_quoted);
    printf("path = %s\n", path);
    printf("special = %s\n\n", special);

    printf("Validation:\n");

    if (strstr(single_quoted, "$name") != NULL)
        printf("PASS: Variable was preserved literally.\n");
    else
        printf("FAIL: Variable was expanded.\n");

    if (strstr(path, "$name") != NULL)
        printf("PASS: $name remains unchanged.\n");
    else
        printf("FAIL: $name was changed.\n");

    if (strstr(special, "$USER") != NULL)
        printf("PASS: Special variable text was preserved.\n");
    else
        printf("FAIL: Special variable was expanded.\n");

    return 0;
}
```

}

```
